

QUALITY POLICY

MISSION

Help women and couples plan and carry out the chosen type of maternity. Our mission is to achieve this desired type of motherhood at the same time as the diagnosis and treatment of their own infertility, while also providing treatments for fertility preservation.

To define our mission, we answered the following questions: What do we do? We achieve all types of maternity, we treat infertility problems and we preserve fertility. For whom? For all women who want it. How do we do it? With the best avant-garde technology and very personalized treatments thanks to the creation of small multidisciplinary teams.

VISION

To be a reference fertility clinic both nationally and internationally.

VALUES

Personalization

Each case is unique to us and we work to offer a personalized solution to each situation.

Professionalism

We have a team of professionals with a long experience who offer close and personal treatment to patients, speaking honestly and trying to achieve "positive" results with as few treatments as possible.

Innovation

We apply the most respectful treatments to the body using the latest technologies available to obtain the best results.

These principles guide our quality policy to ensure compliance with applicable requirements, as well as the maximum satisfaction of our patients and families, by continuously seeking to improve our quality management system and by always aiming to optimize our approaches and processes for risks and opportunities management.
